

LISTING OF CLAIMS:

1. (Previously Presented) A method for automatically sending an order from a first user to a recipient over a computer network, the method comprising:

- receiving order selections from a computer of the first user;
- saving stored order data, the stored order data including the order selections and order purchase information;
- generating a web page having an address and containing the order selections and order purchase information from the stored order data; and
- in response to a first user request, automatically producing and sending an electronic mail message having the address of the web page to a computer of the recipient and generated from the stored order data, the electronic mail message identifying the stored order and order purchase information and allowing the recipient to purchase the stored order using the web page wherein the stored order is not editable by the recipient and generating the web page and the electronic mail message from the stored order data simplifies operation.

2. (Original) The method of Claim 1, further comprising producing a display of the stored order for potential purchase by the recipient.

3. (Original) The method of Claim 2, wherein the display-producing step comprises producing a web page display of the stored order for purchase by the recipient.

4. (Original) The method of Claim 1, wherein the electronic mail message includes a URL which allows for the construction of a web page displaying the stored order.

5. (Original) The method of Claim 1, wherein the stored order includes a single item.

6. (Original) The method of Claim 1, wherein the stored order includes a main item and at least one accessory.

7. (Original) The method of Claim 1, wherein the step of receiving the order selections includes providing an electronic display of possible selections for the user.

8. (Previously Presented) A computer-readable medium containing a program which executes the following procedure:

receiving order selections from a first user;

saving stored order data, the stored order data including the order selections and order purchase information;

generating a web page having an address and containing the order selections and order purchase information from the stored order data; and

in response to a first user request, automatically producing and sending an electronic mail message having the address of the web page to a recipient from the

stored order data, the electronic mail message identifying the stored order and order purchase information and allowing the recipient to purchase the stored order using the web page wherein the stored order is not editable by the recipient and generating the web page and the electronic mail message from the stored order data simplifies operation.

9. (Original) The computer-readable media of Claim 8, further comprising the step of producing a display of the stored order for potential purchase by the recipient.

10. (Original) The computer-readable media of Claim 9, wherein the display is a web page display of the stored order.

11. (Original) The computer-readable media of Claim 8, wherein the electronic mail message includes a URL allowing the production of a display of the stored order.

12. (Original) The computer-readable media of Claim 8, wherein the stored order includes a single item.

13. (Original) The computer-readable media of Claim 8, wherein the stored order includes a main item and at least one accessory.

14. (Original) The computer-readable media of Claim 8, wherein the receiving order step includes producing a display of selectable items for the first user.

15. (Previously Presented) A server system adapted to receive order selections from a first user; the server system further adapted to save stored order data and generate a web page from the stored order data and having an address and containing the stored order data, the stored order data including the order selections and order purchase information; and the server system further adapted to, in response to first user request, automatically produce and send an electronic mail message having the address of the web page to a recipient from the stored order data, the electronic mail message identifying the stored order and order purchase information and allowing the recipient to purchase the stored order using the web page wherein the stored order is not editable by the recipient and generating the web page and the electronic mail message from the stored order data simplifies operation.

16. (Original) The server system of Claim 15, wherein the server system produces a display of the stored order.

17. (Original) The server system of Claim 16, wherein the display produced is a web page displaying the stored order.

18. (Original) The server system of Claim 15, wherein the stored order includes a single item.

19. (Original) The server system of Claim 15, wherein the stored order includes a main item and at least one accessory.

20. (Original) The server system of Claim 15, wherein the electronic mail message includes a URL allowing the creation of a web page displaying the stored order.

21. (Original) The server system of Claim 15, wherein the server system is further adapted to produce a display of selectable items for the first user.

22. (Previously Presented) An apparatus comprising:
means for receiving order selections from a first user;
means for saving stored order data, the stored order data including the order selections and order purchase information;
means for generating a web page from the stored order data and having an address and containing the order selections and order purchase information; and
means for automatically, in response to a first user request, producing and sending an electronic mail message having the address of the web page to a recipient from the stored order data, the electronic mail message identifying the stored order and order purchase information and allowing the recipient to purchase the stored order using the web page wherein the stored order is not editable by the

recipient and generating the web page and the electronic mail message from the stored order data simplifies operation.

23. (Original) The apparatus of Claim 22, wherein the apparatus produces a display of the stored order.

24. (Original) The apparatus of Claim 23, wherein the display comprises a web page indicating the stored order.

25. (Original) The apparatus of Claim 22, wherein the saved order includes a single item.

26. (Original) The apparatus of Claim 22, wherein the stored order includes a main item and at least one accessory.

27. (Original) The apparatus of Claim 22, wherein the means for receiving the order selections from the first user includes means for producing a display of selectable item.

28. (Original) The apparatus of Claim 22, wherein the electronic mail message includes a URL that allows for the production of a web page including the stored order.

29. (Previously Presented) A method for storing order selections on a computer network, the method comprising:

receiving first order selections from a computer of the first user, the order selections including at least one main item and at least one accessory for the main item;

saving first stored order data, the first stored order data including the first order selections and first order purchase information;

receiving second order selections from the computer of the first user;

saving second stored order data, the second stored order data including the second order selections and second order purchase information;

generating a web page from both the first and second stored order data and having an address and containing the order selections and order purchase information for both of the first and second stored order data; and

thereafter, in response to a request from the first user, automatically producing and sending an electronic mail message having the address of the web page to a computer of a recipient from the first and second stored order data, the electronic mail message identifying the first and second stored order data and allowing the recipient to purchase one of the orders using the web page wherein the stored order data is not editable by the recipient and generating the web page and the electronic mail message from the stored order data simplifies operation.

30. (Original) The method of Claim 29, wherein the first and second order selections are selected from a web page from an electronic commerce site.

31. (Canceled)

32. (Previously Presented) the method of Claim 29, wherein the web page for the first and second orders includes a link to a display of the items of the first order and a display of the items of the second order.

33. (Previously Presented) A computer-readable medium containing a program for storing order selections on a computer network, the program configured to execute the following procedure;

receiving first order selections from a computer of the first user, the order selections including at least one main item and at least one accessory for the main item;

saving first stored order data, the first stored order data including the first order selections and first order purchase information;

receiving second order selections from the computer of the first user;

saving second stored order data, the second stored order data including the second order selections and second order purchase information;

generating a web page from the first and second stored order data and having an address and containing the order selections and order purchase information for both of the first and second stored order data; and

thereafter, in response to a request from the first user, automatically producing and sending an electronic mail message from the first and second stored order data and having the address of the web page to a computer of a recipient, the electronic mail message identifying the first and second stored order data and

allowing the recipient to purchase one of the orders using the web page wherein the stored order data is not editable by the recipient and generating the web page and the electronic mail message from the stored order data simplifies operation.

34. (Original) The computer-readable medium of Claim 33, wherein the first and second order selections are selected from an electronic commerce site.

35. (Canceled)

36. (Previously Presented) The computer readable medium of Claim 33, wherein the web page for the first and second stored orders includes links to a display of the items of the first order and a link to a display of the items of the second order.

37. (Previously Presented) A server system adapted to receiving first order selections from a first user, the order selections including at least one main item and at least one accessory for the main item; the server system adapted to save the first stored order data, the first stored order data including the first order selections and first order purchase information; the server system adapted to save second stored order data, the second stored order data including the second order selections and second order purchase information; the server system adapted to generate a web page from the first and second stored order data and having an address and containing the order selections and order purchase information; the server system further adapted, in response to a request from the first user, to

automatically produce and send an electronic mail message having the address of the web page to a computer of a recipient from the first and second stored order data, the electronic mail message identifying the first and second stored order data and allowing the recipient to purchase one of the orders using the web page wherein the stored order is not editable by the recipient and generating the web page and the electronic mail message from the stored order data simplifies operation.

38. (Original) The server system of Claim 37, wherein the first and second stored order are selected from an electronic commerce site.

39. (Canceled)

40. (Previously Presented) The server system of Claim 37, wherein the first and second stored orders includes a link to a display of the items of the first order and a link to a display of the items of the second order.

41. (Previously Presented) An apparatus comprising:
means for receiving first order selections from a first user, the order selections including at least one main item and at least one accessory for the main item;
means for saving first stored order data, the first stored order data including the first order selections and first order purchase information;
means for receiving second order selections from the first user;
means for saving second stored order data, the second stored order data including the second order selections and second order purchase information;

means for generating a web page from the first and second stored order data and having an address and containing the order selections and order purchase information; and

means for, in response to a request from the first user, automatically producing and sending an electronic mail message having the address of the web page to a computer of the recipient from the first and second stored order data, the electronic mail message identifying the first and second stored order data and allowing a recipient to purchase one of the orders using the web page wherein the stored order is not editable by the recipient and generating the web page and the electronic mail message from the stored order data simplifies operation.

42. (Original) The apparatus of Claim 41, wherein the first and second order selections are selected from a web page from an electronic commerce site.

43. (Previously Presented) The apparatus of Claim 41 wherein the display of the first and second stored orders comprise a web page.

44. (Previously Presented) The apparatus of Claim 41 wherein the display of the first or second orders includes a link to a display of the items of the first order and a display of the items of the second order.
